Nationality: Indian **Residency:** Kuwait, Article 18 work visa (transferable)

PROFILE

Laravel engineer in Kuwait who takes business ideas from a sketch to a live system, then keeps them running: the code, the payments and WhatsApp, the servers, the updates and the backups. I lead engineering on 30+ live apps for restaurants, shops, clinics, hospitals, car dealers, learning platforms and fleet operators. Everything I build works in Arabic and English, and most of it is live and earning money, so I ship small, safe changes rather than risky rewrites.

EXPERIENCE

Full Stack Laravel Developer · Majestic Company for Communications, Kuwait City Jul 2024 to now

I design, build and run the company's products, and manage the 30+ live apps and servers they run on.

Restaurant and ERP platform

- Merged four restaurant systems that had drifted apart into one, which now runs 14+ businesses
- Branches, menus with options and add ons, orders printed automatically in each kitchen, delivery apps, accounting, HR and payroll

WhatsApp ordering and business platform

- WhatsApp Cloud API bot that takes customers from cuisine to restaurant to checkout, with carousels, a remembered cart and delivery by location
- Grew into a platform for bookings, clinics and campaigns, with AI replies and spam and cost controls

Hospital meals and room service

- Patients scan a QR code to order meals by type (VIP, special diet or standard), with kitchen approval and orders for companions
- Room tablets to call a waiter, ask for food or send an alert; cash or payment link; daily closing report

Store, learning and fleet systems

- Inventory with barcode scanning for purchases, returns and transfers, plus automatic cash flow, profit and break even reports
- Najeh learning platform: subject packages, live classes, reviews and MyFatoorah payments
- Fleet transport bookings with monthly contracts and missed ride billing, and fuel tracking from GPS mileage

Desktop apps and servers

- Offline Windows POS in Electron and React, and .NET agents that run kitchen printers and office backups
- Deploys with no downtime, queue workers, DNS and mail, and nightly backups to an office NAS

ASP.NET MVC Developer · Freelance, remote

Dec 2023 to Nov 2024

- Led three client projects built in ASP.NET MVC, from first requirements through to launch
- Containerised the apps with Docker and deployed them to Azure
- Role based login and permissions, so each user only sees what their role allows
- An admin dashboard with advanced search across staff and records
- Staff management: employee lists, leave requests and role assignments
- Migrated the databases to Azure SQL

Web Developer · SerpElevator, Mumbai

Jun 2021 to Jul 2023

- Built and maintained 10+ web applications on the MEAN stack and Laravel in a team of five
- REST APIs and third party integrations, with Laravel Passport and Sanctum for authentication
- Responsive layouts across phones, tablets and desktops; performance work that made pages load about 40% faster
- Code reviews and shared best practices that cut bugs by about 15%; deployments on AWS and Azure

Web Designer · SerpClimber, Mumbai

Mar 2020 to May 2021

- Designed and looked after 10+ client websites, mostly on WordPress, with 99% uptime
- Page layouts, graphics and navigation built around each client's goals, plus SEO content that grew visits by about 30%

SELECTED WORK

Social Hub · social-hub.net

AI competitor tracking and social media management for Gulf brands, built on my own. Laravel, Vue, Anthropic.

Fleet Telematics

Live GPS tracking for 7,000+ vehicles in Kuwait: a Python pipeline syncing millions of rows from MSSQL to MariaDB, and a Node.js listener streaming positions over WebSockets.

Desktop POS · github.com/kdafar/pos-app

Windows till app that keeps selling offline, with kitchen display, thermal printing and Arabic and English. Electron, React, TypeScript, SQLite.

Print and Backup Agents

.NET Windows apps: a kitchen print agent with backup printers that never prints a ticket twice, and a tray app that monitors nightly NAS backups.

SKILLS

Backend: PHP 8, Laravel, Livewire, Filament, REST APIs, Queues, Node.js, Python, ASP.NET Core and MVC, C#

Frontend: JavaScript, TypeScript, React, Next.js, Vue, Angular, Tailwind CSS, Bootstrap

Desktop: Electron, .NET Windows Forms, SQLite, ESC/POS printing

Data: MySQL, MariaDB, MSSQL, Azure SQL, Redis, MongoDB

Integrations: WhatsApp Cloud API, Meta Flows, MyFatoorah, delivery platforms, GPS devices, Anthropic and OpenAI

Infrastructure: Linux, Nginx, Docker, Azure, AWS, Git, CI, backups and monitoring

EDUCATION

Bachelor of Commerce

University of Mumbai
2015 to 2018

Web Development and MEAN Stack

SevenMentor, Pune
Completed Feb 2020

LANGUAGES

English, Hindi and Urdu, all at professional level
